Education

JK Lakshmipat University, Jaipur, India Expected May 2028

Bachelor of Technology in Computer Science and Engineering

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Software Engineering

Experience

Jaipur Global Services Pvt. Ltd. May 18 – Jul 18, 2026

Software Engineering Intern – SellerLensIQ (Amazon Keyword Research & SEO Intelligence Platform)

- Engineered SellerLensIQ, a full-stack Amazon keyword research and SEO intelligence platform, building the React frontend, Java/Spring Boot REST APIs, and PostgreSQL data layer to support keyword management, portfolio tracking, competitor analysis, and listing analytics.
- Implemented JWT-based authentication with BCrypt password hashing and PostgreSQL Row-Level Security to enforce per-organization data isolation in a multi-tenant backend.
- Built a CSV-based bulk keyword processing pipeline covering upload, parsing, and persistence, enabling sellers to import large keyword sets directly into portfolio and competitor-tracking workflows.
- Developed competitor gap analysis and listing analytics features, aggregating Amazon product data into dashboards and reports to surface actionable SEO insights.
- Integrated AI-assisted analysis into keyword and listing workflows to auto-generate SEO recommendations from Amazon product data, and debugged API, data-mapping, and database issues across the integrated stack.

Projects

JPMorgan Chase & Co. – Software Engineering Job Simulation (Forage) July 2025

Backend / Event-Driven Systems

- Engineered a Spring Boot microservice integrated with Apache Kafka to process high-volume transaction messages in an event-driven architecture.
- Implemented validation and persistence logic with Spring Data JPA against an H2 database, and integrated an external REST Incentive API using RestTemplate within transactional workflows.
- Built REST endpoints to query user balances, and validated system behavior with Maven test suites and debugger-based inspection to isolate and resolve defects.

ClinicSaaS – Clinic Management System 2026

Full-Stack Engineering (Java, Spring Boot, React)

- Designed and built RESTful backend services in Spring Boot using a layered Controller–Service–Repository architecture to manage doctors, patients, and appointments.
- Modeled data across MySQL and MongoDB, combining relational storage for structured records with document storage for flexible record types.
- Implemented centralized exception handling and input validation to improve API reliability, and connected a React frontend to the backend REST APIs, verifying endpoint behavior with Postman.

Technical Skills

- **Languages:** Java, C++, Python, SQL, JavaScript
- **Backend:** Spring Boot, REST APIs, JPA/Hibernate
- **Frontend:** React, Talwind CSS
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Distributed Systems:** Apache Kafka
- **AI/ML:** Generative AI, LLM Fundamentals, Machine Learning
- **Tools:** Git, GitHub, Maven, Postman, Linux

Certifications & Achievements

- Solved 175+ problems on LeetCode
- IBM Certified Professional Java Developer
- McKinsey Forward Program
